

WHAT IS CLAIMED IS:

1. A board anchor comprising a screw shaft having a longitudinal axis, a freely rotating anchor section attached to the screw shaft, a stop attachment for re-positioning the anchor section in a first position substantially perpendicular to the longitudinal axis of said screw shaft from an initial position parallel with said longitudinal axis of said screw shaft, a stopper mechanism that stops said screw shaft in said cross position, and an attachment ring mounted on said screw shaft, said anchor section having a hole adapted to fit the screw shaft when said anchor section is in said first position.
